

NRS — Opportunity Discovery Test

EVIDENCE PACK · PREPARED 9 SEPTEMBER 2026 · ALL RECORDS RE-VERIFIED SAME DAY

Cover note (read this out, or hand it over first)

I ran a test to see whether **public information alone** — planning applications, procurement notices — can find waste-generating opportunities in our patch.

What I did: scanned roughly 4,000 planning records across every local authority within 110 km of Meriden, for applications lodged between May and September 2026, filtered to those with contamination, remediation, demolition or ground investigation conditions. **442 fell inside our catchment.** Five of them are in this pack.

What I want from you: for each one, tell me whether we already knew about it, and whether we'd actually do anything about it. **"We already knew that" is the most useful answer you can give me** — it tells me this isn't worth pursuing, which is what I'm trying to establish.

Two things I have deliberately not done:

- **No tonnages and no revenue figures.** They cannot be derived from planning records — the volumes sit inside submitted reports I could not access. Any number I put here would be invented, so there are none. The single £ figure in this pack (Card 5) is quoted directly from the published notice.
- **No ranking or scoring.** I don't want to tell you which ones I think are good before you tell me what you think.

How to read the cards: **FACT** is quoted from a named public source.

INTERPRETATION is my reasoning, and I may be wrong.

Every card has live links. Open them in the meeting — that's better evidence than anything I could print.

CARD 1

Rolls-Royce — Sinfin A Site, Victory Road, Derby DE24 8EJ

FACTS

Planning reference	26/00898/DISC — Derby City Council
Date received	13 July 2026
Status	Undecided as at 9 September 2026
Agent	AECOM
Distance from Meriden	approx. 52 km

Verbatim from the planning record:

"Discharge of condition nos 3 (Construction Environmental Management Plan) and 4 (Remediation Strategy) of previously approved permission 26/00060/FUL — Remediation works, and realignment and installation of ground services to facilitate the future development"

A second, related application on the same site:

Reference	26/00920/DISC · received 15 July 2026 · Undecided · agent AECOM
Description	<i>"Discharge of condition 4 (Contaminated Land) of previously approved application no. 25/01884/FUL — Erection of a new manufacturing services building..."</i>

WHAT WAS ACTUALLY DISCOVERED

Rolls-Royce holds a planning permission (26/00060/FUL) specifically for **remediation works** to enable future development at Sinfin A, and the remediation strategy for it is currently with the council awaiting approval.

⚠ **Worth knowing how hard this was to find:** a normal internet search for application 26/00060/FUL returned nothing — the search engine reported it "may be a very recent 2026 application that might not yet be widely indexed online." It took a direct query of the planning database to surface it.

INTERPRETATION (MY REASONING — NOT FACT)

- Decades of aero-engine manufacturing on the site would typically mean hydrocarbons, chlorinated solvents, heavy metals and cutting oils in the ground.
- A remediation strategy submitted for approval normally precedes physical works by weeks to a few months.
- AECOM, as author of the strategy, would ordinarily influence where material goes.
- I do not know the volume.** It is not stated in the planning record.

WHY THIS COULD MATTER TO NRS

Hydrocarbon and heavy-metal impacted soil of the type we treat rather than landfill — and the strategy is still being written, so the disposal route may not be fixed.

SOURCES — OPEN THESE LIVE

- Planning record: <https://www.planit.org.uk/planapplic/Derby/26/00898/DISC/>
- Derby City Council: <https://eplanning.derby.gov.uk/online-applications/applicationDetails.do?activeTab=summary&keyVal=THYV8BFSFOP00>
- Second application: <https://www.planit.org.uk/planapplic/Derby/26/00920/DISC/>

Confidence: HIGH that remediation is happening. **LOW** on scale.

CARD 2

Alpha Anodizing & Polishing Ltd — Bond End, Yoxall, DE13 8NL

FACTS

Planning reference	P/2026/00884 — East Staffordshire Borough Council
Date received	14 August 2026
Status	Undecided — decision recorded as PENDING as at 9 September 2026
Appeal reference	APP/B3410/W/23/3332984 (permission granted on appeal)
Company	Alpha Anodizing & Polishing Ltd — Companies House 06979528
Distance from Meriden	approx. 38 km

Verbatim from the planning record:

"Discharge of Condition number 9d (remediation works) and 9e (verification report) of planning permission allowed on appeal APP/B3410/W/23/3332984 relating to demolition of commercial works to facilitate the erection of 8 No. dwellinghouses including landscaping"

WHAT WAS ACTUALLY DISCOVERED

A working metal-finishing plant is being demolished for housing, and the remediation works condition is with the council right now.

⚠ **Targeted searching for this site returned only a Facebook page and business directory listings.** The appeal and the remediation condition did not appear. This is the sort of thing that is effectively invisible unless someone is watching planning data systematically.

INTERPRETATION (MY REASONING — NOT FACT)

- Anodising and metal polishing use sulphuric and chromic acid baths and caustic etch, and generate heavy-metal bearing residues.
- Soils on such sites commonly contain **chromium, nickel and aluminium**, with acidic residues, and depending on process history possibly cyanide-bearing material.
- Demolition of an industrial building of this age may involve asbestos.
- Only 8 houses, so the site is small — volume is likely modest.** I have not estimated it. The interest here is the *hazard class*, not the quantity.

WHY THIS COULD MATTER TO NRS

Heavy-metal contaminated soil is exactly the specialist stream we're set up for, and it is the sort of material that needs treatment rather than a landfill ticket. Small volume, potentially high value per tonne.

SOURCES — OPEN THESE LIVE

- Planning record: <https://www.planit.org.uk/planapplic/EastStaffordshire/P/2026/00884/>
- East Staffordshire portal: <https://eaststaffs-publicportal.statmap.co.uk/horizoNext/publicportal/planningapplications/644192>
- Companies House: <https://find-and-update.company-information.service.gov.uk/company/06979528>

Confidence: HIGH that remediation is required. **MEDIUM-HIGH** on contaminant type. **LOW** on volume.

CARD 3

Mell Square, Solihull

FACTS

Planning reference	PL/2026/01052/DIS — Solihull MBC
Date received	2 June 2026
Status	Undecided — consultation closes 22 September 2026
Agent	Turley
Parent permission	PL/2025/00547/MAJFDW
Distance from Meriden	approx. 9 km

Verbatim from the planning record:

"Discharge condition No. 7 (Land Contamination (Full — Phase 1) — part discharge of part 3 and 4 following planning approval PL/2025/00547/MAJFDW."

From published sources:

- **FACT** Solihull Council approved the scheme on **6 February 2026** for up to **1,600 homes**, to be renamed **Holbeche Place**.
- **FACT Muse** (Morgan Sindall-owned) is the developer, selected as preferred bidder in October 2023.
- **FACT GRAHAM** has been appointed to deliver phase one — 346 build-to-rent homes across four buildings.
- **FACT** "Demolition and enabling works are expected to start in summer 2026."

WHAT WAS ACTUALLY DISCOVERED

A live land contamination condition on the largest regeneration scheme in our immediate area, with the main contractor already named.

INTERPRETATION (MY REASONING — NOT FACT)

Town-centre demolition of 1960s retail would generate substantial C&D arisings, with asbestos likely in buildings of that era, over made ground. **Volume not estimated.**

WHY THIS COULD MATTER TO NRS

Demolition arisings and ACM, 9 km from Meriden — about as good as haulage economics get.

SOURCES — OPEN THESE LIVE

- Solihull MBC masterplan: <https://www.solihull.gov.uk/about-council/mell-square-masterplan>

Confidence: HIGH.

CARD 4

Jaguar Land Rover — Lode Lane, Solihull B92 8NW

FACTS

Planning reference	PL/2026/01382/DIS — Solihull MBC
Date received	24 July 2026
Status	Undecided — consultation closed 28 August 2026
Agent	WSP
Parent approval	PL/2025/01396/PPFL, dated 9 April 2026
Distance from Meriden	approx. 9 km — the closest in this pack

Verbatim from the planning record:

"Discharge of condition 4 (Contaminated Land parts 1 and 2) planning approval PL/2025/01396/PPFL dated 09.04.2026 for Demolition of 1 No. single storey building and associated substation; demolition of 1 No. two storey building; and erection of an extension"

WHAT WAS ACTUALLY DISCOVERED

Demolition of two buildings and a substation at Lode Lane, with a contaminated land condition currently being discharged and **WSP** acting as agent.

INTERPRETATION (MY REASONING — NOT FACT)

- Automotive manufacturing on this site since the 1940s would typically mean hydrocarbons, solvents and metals in the ground.
- Demolition of a substation raises the possibility of oil-contaminated ground.
- Mid-century industrial buildings frequently contain asbestos.
- Two buildings only — this is not a large job.** Volume not estimated.

WHY THIS COULD MATTER TO NRS

Nine kilometres away, and JLR is a strategically significant local account regardless of the size of this particular job.

SOURCES — OPEN THESE LIVE

- Planning record: <https://www.planit.org.uk/planapplic/Solihull/PL/2026/01382/DIS/>
- Solihull MBC: <https://publicaccess.solihull.gov.uk/online-applications/applicationDetails.do?activeTab=summary&keyVal=TIO3GCOEL7100>

Confidence: HIGH that the work is consented. MEDIUM on waste arising.

CARD 5

HS2 — EKFB joint venture seeking waste management services

FACTS

Source	UK Government Contracts Finder — published procurement notice
Notice title	"EKFB JV — Waste Management Services"
Date published	26 August 2026
Value stated in the notice	£1,000,000 ← the only £ figure in this pack, quoted directly from the source
Buyer	Eiffage Kier Ferrovial BAM (EKFB) JV — HS2 Main Works Civils, Lots C2 & C3

Verbatim from the notice:

"Eiffage Kier Ferrovial BAM (EKFB) JV is seeking expressions of interest from interested parties for Waste Management Services to support the delivery of the C23 project, which forms part of the HS2 Main Works Civils Contracts."

A second notice from the same buyer:

Title	"EKFB JV — Daywork Hire of 8 Wheel Tipper Wagons"
Published	22 July 2026 · value stated £1,000,000
Verbatim	"...the supply of 8 wheel tipper wagons to support the delivery of our C23 HS2 project."

FACT C23 covers an **80 km section between the Chiltern Tunnel and Long Itchington Wood** in Warwickshire. **FACT** The stated route to register is **CompeteFor**, or **Constructionline** using code **HS2EK**.

WHAT WAS ACTUALLY DISCOVERED

A tier-one contractor **publicly asking for waste management suppliers**, with a value attached and a named registration route. This is not an inference about what someone might need — it is a direct request.

INTERPRETATION (MY REASONING — NOT FACT)

- Long Itchington Wood is roughly 25 km from Meriden, so the northern end of this route sits inside our normal working area.
- Major rail civils would generate excavated arisings, demolition materials and general C&D, with hazardous fractions likely.
- **Volumes are not stated in the notice.** The £1m is the stated contract value, not a figure I have calculated.

WHY THIS COULD MATTER TO NRS

Tipper haulage, muckaway, inert and C&D handling — and the buyer has published exactly how to get on the list.

SOURCES — OPEN THESE LIVE

- Contracts Finder: <https://www.contractsfinder.service.gov.uk/> (search "EKFB")
- EKFB supply chain / CompeteFor: <https://www.competefor.com/ekfb/>
- Constructionline EKFB partnership: <https://www.constructionline.co.uk/buyers/partnership/ekfb/>

Confidence: HIGH. The buyer, the requirement and the value are all published.

Closing note (after the questions, not before)

These five came from a pool of **442 applications in our catchment**, from a four-month window. Five more of comparable quality were set aside to keep this conversation to half an hour — including a **Large** application at Woodville, Swadlincote (ref DMOT/2026/0939) on former opencast land where the **consultation closes 23 September 2026**.

What I honestly could not do:

- Work out tonnages or values — those sit in submitted reports behind council document portals, and one council's portal wouldn't respond at all.
- Identify the contractor on most of them. **Around 6 in 10 planning records don't name anyone** we could ring.

I'd rather you knew both of those now.
